

**SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR AN
OFFICE PRODUCTS SUPPLY CHAIN MANAGEMENT FRAMEWORK**

5

ABSTRACT

A system, method and computer program product are disclosed for managing an office product supply chain utilizing a network. A network is utilized to receive data from a plurality of office product outlets of an office product supply chain in which the data relates to the sale of office product by the office product outlets. An electronic order form is generated based on the data for ordering office product from an office product distributor of the office product supply chain. The data is transmitted via the network to the office product distributor of the office product supply chain. The data is also transmitted to an office product supplier of the office product supply chain utilizing the network. Additionally, activity in the office product supply chain is forecast utilizing the data.
